M-U-8 MU8	19922	M-U-8 F1 on Item Code	Change was made to the F1 look up on the RM Item Number fields in the Raw Material Loadtag Creation Screen (MU7 or MU8). Only the Raw Materials of the PO Numbers in the From and To PO# fields will be listed in the RM F1 Look ups.	Defect
Main Menu	15888	User Count Validation	<p>With the release of 16.4.4 we are implementing new functionality to track users against the number of user licenses you have licensed with your Advantzware application as our database supplier is going to begin auditing all customers for accuracy in licensing. This release introduces validation methods to all users: Total License Count and User Session Count.</p> <p>- Total License Count Upon requesting to login a user's session will be added to the total number of users currently logged in and the accumulate all concurrent users to compare to your License Count. If the total User Count exceeds the License a warning to contact your system administrator will be presented.</p> <p>- User Session Count If the user already has a session running and they initiate another session with the same login name, they will be prompted to choose one of the following:  - Add Additional Session: choosing this option will start another session for the user while leaving the other session logged in.  - Logout Other Sessions: choosing this option will logout any other session they have running and start a new session.  - Exit Application: choosing this option will cancel their request to log in.</p> <p>We recommend these options be reviewed with your users to avoid confusion and questions when they see these messages.</p> <p>If you feel you are receiving these login messages in error, validate the number of users currently logged in via the 'User Control' program (N-K-5). In this program, on the 'Current' tab, all user currently logged in will be displayed. If after you have reviewed the current logged in users and still feel the validate values are incorrect, please contact Advantzware Support.</p>	Feature
