### Scanners

**Enable faster and more accurate data capture with Symbol bar code scanners**

Long recognized for their durability and reliability, Symbol bar code scanners are designed to maximize productivity by providing optimum performance, even in less than optimum conditions. Our complete line of bar code scanners — handheld and hands-free, wearable, rugged, scan engines, laser and digital — provide power, performance and durability, enabling you to increase throughput at the checkout counter or on the production line, track and control parts and medications and manage inventory more accurately, even in harsh, dirty or extreme environments. And, because nearly all of our scanners are offered in both corded and cordless form factors, you won't be limited by your technology.

Together with our mobile computers, wireless infrastructure, industry-leading partner applications and management software products, our bar code scanners provide the foundation you need to become an organization on the move. Because all parts of the solution work together — and with your other networks and information systems — you're able to cost-effectively build and adapt your mobile enterprise as your business grows and changes.

#### [General Purpose](#)

Whether you need to increase throughput at the checkout counter, track and control medications at the pharmacy or hospital, manage inventory or process identification documents, Symbol offers the right bar code scanner for your application and environment.

#### [Rugged](#)

Collect data with confidence using our broad portfolio of rugged advanced data capture devices built for reliability under harsh, dirty or extreme conditions.

#### [Fixed Mount](#)

Rely on MiniScan Fixed Mount Scanners for the quickest, easiest and most flexible integration of bar code scanning into many different types of OEM and fixed mount applications.
