**16.11.01 Release Notes**

Type	Hot Key or Application	Subject	Resolution	Ticket
Feature	API	API Inbound Configuration maintenance screen development	The API module now contains the inbound configuration maintenance screen to configure or adjust the inbound API configurations. The API module license is required.	52543
Feature	API	Inbound API - CreateInventoryStockAliasForPO	The API module now supports load tag creation from vendor scanned tags. The API module license is required.	51795
Feature	API	Inbound API Transaction Tester/Monitor	The API module has an available inbound tester and monitor to test inbound API requests. API module is new to the menu under N-A and requires the API module to be licensed.	52341
Feature	GLOBAL	Need to include the Security setting whenever permissions fail so the user knows which setting needs adjusting	The security denied message has been enhanced to indicate the program or panel setting to allow better control over security and help find the proper permission setting.	52802
Feature	I-C-3	Creating GL Entries for Counts	Journal entries can no longer be turned on/off based on the report parameter. They will now utilize N-K-1 = FGPostGL and if logical value set to Yes, journal entries will be created for count variances. If set to No, journal entries will not be created.	52555
Feature	I-F-1	Request - Import of Re-order Levels by Warehouse	The inventory re-order levels can now be exported using the Excel button while viewing the inventory locations and the same data can be imported using the Import master utility. Import module license required.	49188
Feature	I-F-4	Add logical value - (Field Name = isAPIEnabled) that is used to indicate this location will use API	A new field titled 'API Enabled' has been added to the inventory location table to allow for API calls for specific locations that are API enabled.	52779
Feature	N-M	Add new option to secure the price matrix and only allow Online check box to be changed	New utility was added to utility options to allow for editing of just the online flag in the price matrix. It is available to be added to the Pop Up menu - updPriceMtxFlg.r	48764
Feature	O-F-8 XMLImport	Excel Order Template Doesn't Pull Price from Quote (OEPriceHold Logic)	Enhanced the Excel Order import template such that If quote Number is provided, find quote by going directly to quote that matches part-number *or* item number (if Item number is not blank).	49196
Feature	O-R-6	O-R-6 Report to add the Ship to field from the order line	The report now contains the Ship to from the order line on the report as a selectable column or standard depending on the format used.	52499
Defect	-	CAN forms label corrections needed	Standard Canadian business forms (All forms ending in 'CAN') now support the special character sets for French Canadian symbols.	52364
Defect	-	RFID Monitor not auto posting transfers or not processing in the right sequence	The RFID monitor will now get the location from the bin rather than the load tag.	52813
Defect	B-M-S	Scan Vendor Tag - does not populate the Scanned By & Date/Time on RM history	Updated specific fields such that the scanned by field is updated only when it is scanned. If receipts or automated entries are created, they will not contain the scanned by data completed.	52587
Defect	E-C E-F	Inks/Pack - Ink description - do not truncate to 19, allow for input of 30 characters.	The ink descriptions have been enlarged to match the inventory lengths, but will only be displayed in full on custom job tickets. Standard job tickets will continue to display the current field length values.	52833
Defect	E-F or E-C	CEPackEnhanced - Log = YES - Fix to support misc pallet material and enhanced copy	The Estimate   Inks/Pack - Enhanced Packing function has been expanded to now allow the user to add 'type D' materials (i.e., Pallets) to the form.	51948

**16.11.01 Release Notes**

Type	Hot Key or Application	Subject	Resolution	Ticket
Defect	I-C-1	Physical Count Report - Receipt Date is incorrect	The Inventory count report will show the aging based on the date of the receipt of the tag if it is a tag based item and the last receipt if no tag is identified. If the tag does not have a receipt for some reason, then the date will default to 01/01/01 as it cannot be determined if the original receipt was deleted by a user.	52330
Defect	I-C-2	Message in I-C-2 warning of closed jobs	When entering a count, no message will be displayed related to a job status as it is not applicable on count entries.	52730
Defect	I-F-1 Bins Tab-Allocated	Allocated view must be enhanced - Include Web Orders (Order status = 'W')	The jobs drill down now displays the quantity details in the initial view of the jobs drill down and the allocated button displays Web Order jobs as they are included in the allocated quantity. In addition, the orders are no longer limited to the defined limit of orders as set in the OEBrowse setting to display all orders for the item.	52821
Defect	I-U-5, V-U-3	I-U-5 Items Unable to Post	The posting process was recalculating the entire FG item based on history and bins and this has been removed to maximize the performance of the posting process. If an item is not accurate, it needs review as to the source rather than having the post process auto-correct things without knowledge as to problem.	52192
Defect	SB	Status Checkoff's - warning added when other user has program open	If a user tries to launch Status checkoff, and another user is already running the program and updating the schedule statuses, they will be presented with a dialog box informing them of who the other user is.	52832
